(a) $k=5$, one-sided signs; circles: splitting runs
duplicate pair dominates probability,
macroscopic core still dominates mean
duplicate pair dominates
probability and mean
macroscopic core dominates
probability and mean
$\Phi(z)=\lambda_M$
$s_M\eta_k\phi(z)=2\lambda_M$
t_* (asymptotic)
critical window
depth below threshold $t=-z_0$
M
(b) conditional mean along the load axis
$M=1024$
$M=4096$
$M=16384$
$M=32768$
$M=65536$
$c_F\left(\frac{d}{2}\right)=\mathbb{E}[\hat{d}-d\mid F]/2$
$t=-z_0$
