(a) mechanism weight
share of macroscopic-core failures
$M = 1024$
$M = 4096$
$M = 16384$
$M = 65536$
z_{sh}
(b) conditional mean, all failures
$\mathbb{E}[X \mid F]$, one-sided signs
z_{sh}
(c) duplicate-pair layer, $2\sigma/s_M$
observed / predicted shift
$\sigma = +1$
$\sigma = -1$
M
